II

AB Fungicidal mixts. contain synergistically effective amts. of the following active constituents: (1) N-[[[(cyclopropylmethoxy)amino][6- (difluoromethoxy)-2,3-difluorophenyl]methylene]benzeneacetamide (I) or a derivative wherein the benzeneacetamide moiety may have 1-3 substituents on the Ph ring chosen from among halo, C1-C4 alkyl, C1-C4 alkyl halide, or C1-C4 (halo)alkoxy; (2) a benzophenone (II), in which R1 = Cl, Me, MeO, AcO, pivaloyloxy, or OH; R2 = Cl or Me; R3 = H, halo, or Me; and R4 = C1-C6 alkyl or benzyl, whereby the Ph portion of the benzyl radical can substituted by halo or Me; (3) epoxiconazole and, optionally; (4) pyraclostrobin. Thus, I + metrafenone + epoxiconazole at 0.25 + 0.25 + 1 ppm (1:1:4 mixture) synergistically controlled wheat powdery mildew caused by Erysiphe graminis tritici.

AB To control barley boun spot. caused by Bipolaris sorokiniana, fungicides and more recently elicitors have been used. The objective of this work was to evaluate the development of 2 barley cultivars (BRS 195 and 225) in response to treatment with 2 elicitors xanthan gum and alicin and the fungicide epoxiconazole + pyraclostrobin compared with non treated control plants. The experiment was carried out at Fundacao Agraria de Pesquisa Agropecuaria (FAPA), Guarapuava - PR, in a randomized complete block design. In the growth anal., they were performed calculating the leaf area index (LAI), relative growth rate (RGR), and net assimilation rate (NAR). A similar development was observed for both cultivars in all treatments. The cultivar BRS 225 showed higher dry weight accumulation during the evaluation period than cultivar BRS 195 because of its shorter vegetative growth phase. The LAI increased until the boot stage following decrease. The RGR decreased from the 1st to the last evaluation. The NAR decreased until 57 days after emergency and then increased during all remaining evaluations.
